

Special Issue

mHealth Application in Ambulatory Care Settings

Message from the Guest Editor

Mobile health (mHealth) applications are becoming widely available to assist smartphone users to engage in preventive health behaviors, maintain wellness, and self-manage chronic or acute conditions. Patient-generated health data offer new opportunities for clinician and patient communication. However, to provide sufficient evidence for the effectiveness of such strategies, we must close the gap with research-tested interventions. This Special Issue seeks papers on mHealth or other digital health strategies to improve public health in the outpatient setting, including new clinical approaches for prevention and self-care management, telehealth integration, and increased care coordination. We also welcome high-quality systematic reviews and research protocols related to digital health innovations. Please consider a submission to this issue if you have primary care, behavioral health, preventive, or chronic care digital strategies under evaluation.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
