

Special Issue

Marijuana Use and Addiction Prevention

Message from the Guest Editor

The recent history of marijuana in public health is changing rapidly, from an illegal drug to an alleged medicine, through politics and not the usual route of research and science. Laws governing marijuana are in flux and contradictory. The overriding questions are do we have viable public health policies for marijuana? Does public health even matter in the face of demand for an addicting drug? What will be the costs of addiction to marijuana? Will addiction to marijuana become another opioid epidemic? Will profits and big Business drive addiction as do cigarettes? Will big pharma take over production and marketing as with narcotic medications? Our Special Issue on marijuana will focus on answers to these core questions. The issue will present evidence, analyze policy, and propose strategies central to prevention and public health for marijuana. The issue will describe prevalence and risks for marijuana addiction and models for its prevention. It will also provide the latest support for marijuana and other cannabinoids as medicines.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
