Men's Health and Urologic Oncology—A Common Challenge for Urology and Public Health

Message from the Guest Editors

The ageing of the population is a global healthcare concern, with increasing prevalence of multiple health conditions which were considered rare only a few decades ago. Despite the COVID-19 pandemic, the incidence of most common urological cancers continues to increase. Three out of the ten most common cancers in the male population belong to the area of interest of urological oncology, which translates into an ever-growing number of patients. This Special Issue will focus on a broad area of urologic oncology and urological aspects of men's health, with special attention paid to the impact of urological conditions on public health, the influence of environmental factors on urological disease, and multidisciplinary, patient-centered approaches to treatment.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
