

Special Issue

Primary Mental Health Care

Message from the Guest Editors

We invite you to contribute a manuscript to a Special Issue focusing on primary mental health care. Mental disorders are among the top two contributors to global burden of disease as measured in years lived with disability, affecting more than 125 million people worldwide in 2019. Primary mental health services that are universally accessible, effective, efficient and of high quality have the potential to help address this public health problem. However, a substantial portion of people with mental health problems do not access treatment – some by choice and others due to various access barriers – and others do not attain the desired benefits of the treatment they receive. Among those who seek treatment, most do so in a primary care setting in which general practitioners are often the first point of contact. Primary mental health care involves psychological interventions, pharmacotherapy, referrals and follow-up care to treat or prevent mental disorders. It also includes suicide prevention services for at-risk individuals and their families. Primary mental health care services can be delivered face to face or via other modes of communication.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
