

Special Issue

Mental Health Consequences of COVID-19: The Role of Social Determinants

Message from the Guest Editor

COVID-19 has changed the way we live and has undoubtedly had an impact on mental health and well-being. The Special Issue calls for papers which aim to examine the mental health consequences of COVID-19 from a social-psychological perspective. We specifically seek to answer questions such as: "What are the social determinants of well-being and resilience during the pandemic?", "How did the pandemic put a strain on harmonious intergroup relations?", "What was the specific impact of COVID-19 on the mental health of ethnic-cultural minority members, immigrants, and other disadvantaged groups in society?", "What are the motivational underpinnings of lockdown-, vaccination-, and other COVID-related behaviors?", "Did the pandemic change the political landscape and citizens' support?". We encourage contributions, to integrate two or more theoretical models, investigate long-term social consequences of COVID-19, and/or offer crucial implications for policy makers targeting interventions. We are especially interested in articles from social groups or geographic locations that are under-represented in the journal.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
