

Special Issue

Migration, Work and Health

Message from the Guest Editor

In recent years, the increasing global number of migrant workers (about 150 million, according to the available estimates) has posed a significant challenge from political, economic, social, health and safety viewpoints. It is well known that the relationships between migration, work and health is complex. This Special Issue aims to provide an updated, multidisciplinary and evidence-based state-of-the-art on the occupational health and safety of migrant workers worldwide, covering the all range of primary, secondary and tertiary prevention, hopefully to set milestones for occupational health in this field. We would like to offer to researchers and experts the opportunity to publish their original work, especially in the fields of occupational health, public health, epidemiology, social sciences, health economics, and international labour law. Particularly welcomed are data from field studies, effectiveness intervention studies and reviews related to this research area.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
