Neighborhood Environmental Influences on Health and Well-Being

Message from the Guest Editors

Globally, there are a number of trends relevant to neighborhood characteristics which can influence health and wellness. These include urbanization, inequality, gentrification and displacement, aging, and migration. Neighborhoods can change as people migrate to them due to economic opportunities or because they are fleeing unrest. We are interested in research that explore the health and wellness effects of these processes, policies, or other contemporary developments which provoke an examination of place and health. Featured studies could highlight an unconventional method or dataset, could be a case study or longitudinal analyses of natural experiments, interventions, or large cohort studies.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
