New Advances in Cardiovascular Diseases

Message from the Guest Editor

Cardiovascular disease is the number one cause of death in the world. Advances in diagnosis, research, and treatment represent the winning strategy in order to defeat this enemy. In particular, new advances in cardiovascular disease mainly affect the following areas: new drugs to cut the cholesterol level by half, new strategies for controlling blood pressure, exploring biomarkers and genes to expand the knowledge of cardiovascular disease, replacing the aortic valve without surgery, exploring options to treat congenital heart disease, endovascular treatment of aortic disease, minimally invasive surgery, engineering T cells to fight heart damage, and a new understanding of heart failure. In this Special Issue, we would like to provide an overview of the most recent discoveries related to this topic.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

School of Society and Culture, Adelaide University, Adelaide 5001,
Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
