New Advances in Dementia Care

Message from the Guest Editor

Dementia affects millions of people around the world, including both people with dementia as well as their families and caregivers. It is important to develop low-cost, culturally and contextually appropriate and effective actions to prevent, delay or manage dementia. Scientists and practitioners of different disciplines are working together to offer the best solutions in dementia care. We welcome manuscripts from all disciplines that focus on the delivery of care for people with dementia, family caregivers, and formal caregivers (i.e., professionals who offer dementia care). Studies showing clinical trials or pilot tests of innovative dementia care in community or long-term care settings, developmental process or implementation of dementia care interventions, and feedback from stakeholders are most welcome. The use of technology in dementia care can be a highlight. Impacts of dementia care on people's psychosocial or physical health, economical contribution to society, sustainability in health care systems and manpower issues could also be the focus of the submitted manuscripts.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
