

Special Issue

The Negative Effects on Health Due to Noise Exposure

Message from the Guest Editor

This Special Issue has a focus on the adverse effects of noise on human health, distribution of exposure, exposure–response relationships, prevalence estimates, additional health outcomes, burdens to potentially vulnerable subgroups (e.g., the elderly and lower socioeconomic groups), effects when combined with air pollution and chemical exposure, and the effectiveness of interventions in reducing noise exposure and negative health impacts. Papers addressing issues relevant to the negative health effects of noise exposure are invited, and especially those addressing strategies to protect communities from noise exposure and reducing the noise-related burden of disease.

Guest Editor

Prof. Dr. Marjorie C. McCullagh

Occupational Health Nursing Program, University of Michigan School of Nursing, Ann Arbor, MI 48109-5482, USA

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
