

Special Issue

Deployment of Green Infrastructure Practices for Integrated Healthy Watershed Management

Message from the Guest Editors

Integrated watershed or water resource management across different sectors is of great importance in ensuring the security and sustainability of the water supply. This SI collects original research and critical reviews about scientific and technical information on the recent advances in green-infrastructure (GI) practices for achieving integrated healthy watershed management. The primary areas of interest of this *Special Issue* include, but are not limited to:

- Engineered natural systems;
- Low-impact development;
- Low-energy-demanding water-purifying systems;
- Water sustainability;
- Ecosystem services;
- Stormwater control and flood management;
- Resilient (sponge) city;
- Food, water, and energy nexus;
- Land-use management.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
