

Special Issue

Primary Care and Geriatric Nursing

Message from the Guest Editors

The increase in life expectancy, in chronic diseases, the number of older people with disabilities, functional decline, and dementias have changed the morbidity profile and contributed to the emergence of new healthcare needs that promote health literacy and increase autonomy and independence so that the person can age within the community and at home. In this Special Volume dedicated to “Primary Care and Geriatric Nursing”, we challenge nurses and other professionals to disseminate studies, systematic reviews, and experience reports focused on new models of care delivery to community-dwelling older people and caregivers—interventions that promote active aging in the context of people's lives, ensuring and enhancing community resources, for example, through social prescription, chronic disease management in the community, and accident prevention in the community and safety in this care practice environment.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
