Special Issue

Obesity Prevention and Intervention in Children and Adolescents

Message from the Guest Editor

Obesity is among the most significant health challenges facing today's 1.8 billion children and adolescents.

Obesity risk factors are well established during childhood and adolescence, making these life stages critical periods for the development of lifelong health trajectories. Obesity is also a visible risk factor associated with stigma and discrimination. Moreover, there is an inequitable distribution of overweight and obesity, with a higher prevalence in children and adolescents from low socioeconomic backgrounds.

In this Special Issue, we are seeking unpublished works, including but not limited to (i) interventions targeting individuals or families for the prevention and management of overweight and obesity; and (ii) interventions targeting environment or policy change. Papers reporting on formative research of intervention design, primary and secondary outcome data or process evaluation data will be considered. We will consider studies utilising new digital technologies, those targeting vulnerable population groups, traditional clinical trials, observational studies, systematic reviews and meta-analyses.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers.

Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
