One Year into the COVID-19 Crisis: Mental Health, Burnout, Trauma and Resilience

Message from the Guest Editors

The COVID-19 pandemic crisis began in March 2020 with strict containment measures imposed in most countries to contain the spread of the virus. Recent studies have highlighted the deleterious effects of the first waves of COVID-19 on the mental health and well-being of the general population. More than a year has passed since the onset of the crisis, and psychological distress and emotional exhaustion among people of all ages are on the rise. Educational institutions, outpatient psychological and social care services, and residential services such as prisons and youth welfare institutions have been operating for more than a year under the pressure of the crisis and the associated health measures. In the face of the adversity of this long and unprecedented health crisis, people and institutions have had to "cope" and develop strategies to survive. About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
