Oral Health and Dental Care Access Disparities: The Contexts of Immigrant Health and Minority Health

Message from the Guest Editors

Embodying many minority health phenomena, the health of immigrants is often affected by changing social and cultural norms, differential access to clinical care, and the coexistence of new and preexisting health conditions. Oral health and dental care access disparities constitute prime examples of the challenges that new and recent immigrants face in the long process of adapting to new environments: physical, dietary, health systems, and many more aspects. An emerging body of research continues to characterize the features of such a complex landscape, but the rapid pace of change requires an up-to-date, sophisticated examination of the underlying factors. Such a knowledge base will inform strategies to ameliorate risk factors; improve culturally appropriate access to care and prevention; alleviate acute and long-term complications of poor oral health; and supply objective data to support social and health policies addressing disparities in the contexts of immigrant health and minority health. Prof. Gerardo Maupome, Assistant ,

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
