

Special Issue

Pain Neuroscience Education, Chronic Pain, and Health Care

Message from the Guest Editors

The biopsychosocial model includes the application of pain neuroscience education (PNE) to a multimodal treatment approach for the management of chronic pain conditions. PNE is applied to the management of disability associated with chronic pain and to address inappropriate placebo beliefs. It is also believed that PNE may be useful in the prevention of chronic pain by improving beliefs and addressing fear about pain. Additionally, education can be also applied to promoting healthy lifestyle habits within the general population. This Special Issue targets the topic of PNE from a broad perspective, including proper management of chronic pain conditions but also health care promotion and prevention. Any group investigating PNE is encouraged to submit to this Special Issue.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
