

## Special Issue

# Parenting and Offspring Health and Well-Being

### Message from the Guest Editor

Different aspects of parenting play a significant role in child development. These effects may span long into adulthood. However, there is still much to be learned on the effects of parenting on health and well-being of the offspring. For instance, more knowledge is needed on the interactions between parenting and child genotypes, moderating effects of race/ethnicity, and moderating effects of timing of parenting in relation to developmental stage. There are also recent challenges, such as increased media use by parents and by children, which are likely to affect parenting and child outcomes in the ways that are not well understood yet. This Special Issue is open to quantitative longitudinal studies in subject areas related to “Parenting and Offspring Health and Well-Being”.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
