

Special Issue

Pathophysiology of Type 2 Diabetes, Obesity and Thyroid Disorders

Message from the Guest Editors

Globally, type 2 diabetes, obesity, and thyroid disorders are three of the most prevalent endocrinological and metabolic clinical problems, reaching epidemic proportions. This Special Issue aims to publish significant findings in the field of clinical studies on type 2 diabetes, obesity, and thyroid disorders. These clinical problems cover a broad range of research fields, from genetic and molecular research through to clinical research and clinical care, as well as some of the most crucial public health issues. We also invite researchers to publish reviews based on their own professional experience and published literature. We especially encourage submissions of papers presenting new findings that substantially widen the current knowledge and can be directly introduced into clinical practice. Thus, this Special Issue will readily welcome every outstanding contribution in the field of type 2 diabetes, obesity, and thyroid disorders. Best regards, and

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
