

Special Issue

The Foundations of Effective Interprofessional and Patient Communication

Message from the Guest Editor

Communication reflects the emotional disposition of a person. A healthcare professional is regularly subjected to emotional overload during his daily practice, which can, indeed, be overwhelming and might saturate their entire cognitive load. The outcome of emotions is directly reflected in the quality of the care offered by a healthcare professional and their communication. One would rightly think that emotional intelligence, which is basically our awareness of the surrounding people's emotions and control over our own emotions, also conditions the quality of communication. This special issue aims to explore the several facets of communication between healthcare professionals and patients and its importance, teaching, and improvement when communication might seem difficult. This issue will also examine how the emotional intelligence of the healthcare professional impact the quality of their communication and provided care.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
