

Joint Special Issue

Pediatric and Primary Health Care Services in the 21st Century

Message from the Guest Editors

Primary Health Care plays an essential role in 21st Century Medicine and it is probably the most important reference system that can deal with the huge challenges brought by the beginning of this century. The use of technology, the COVID-19 pandemic, the empowerment of the patients, the increasing importance of pediatrics, and the crisis in costs are challenging the medical practices of the last century. This Special Issue provides opportunity to satisfy the needs of the primary health care professionals, so we can provide them with the necessary tools to deal with these enormous challenges. We are looking for manuscripts focused on health technology, especially apps, websites or other tools, that can help professionals and patients, especially parents and children, empower patients and help to overcome the COVID-19 pandemic, and deal with increasing costs, from the perspective of primary health care. Thus, we invite the submission of manuscripts describing qualitative or quantitative research in areas such as eHealth, mHealth, mobile or computer apps, pediatrics, COVID-19 and costs, always from the perspective of the role of Primary Health Care in 21st Century Medicine.
