Pharmaceutical Policy and Practice Research

Message from the Guest Editors

Medicines expenditure constitutes 60–80%, of healthcare budget in low and middle-income countries, while they are 10–25% in the high income developed countries. This makes it one of the most attractive fields to study and to provide evidence-based solutions with regards to "access" and "use" of medicines. Medicines' role is also vital to alleviate suffering and to improve patient health outcomes, however, one-third of the world's population still lacks access to essential medicines. This series would focus on pertinent issues on pharmaceutical policy and practice including "access and affordability of medicines", "medicines funding and reimbursement", "generic medicines", "medicines safety", "Medicines pricing" "access to high-cost medicines" and "biosimilar". This series would also shed light on the role of pharmacists in the "broader health sphere" and would analyse the "impact of pharmacy services" on "patient health outcomes".

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
