Dissemination and Implementation Science Methods and Measures for Physical Activity Interventions in Community Settings

Message from the Guest Editors

Dissemination and implementation science (DIS) is a growing field that aims to understand the processes and outcomes of selecting, adapting, delivering, evaluating, and sustaining evidence-based interventions. Much of DIS has been applied in clinical settings, and more recently, attention has been given to community-specific barriers, facilitators, processes, and outcomes. This Special Issue of the *International Journal of Environmental Research and Public Health* invites papers that report answers to significant DIS-related research questions through the application of robust methods and measures.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
