

Special Issue

Health Consequences of Prenatal Exposure to Adverse Environmental Factors in Infants and Children

Message from the Guest Editors

We are pleased to announce a new Special Issue entitled “Health Consequences of Prenatal Exposure to Adverse Environmental Factors in Infants and Children”. The aim is to publish high-quality scientific contributions (original research articles or comprehensive/systematic review papers) providing novel insights into the impact of the exposure during pregnancy to substances of abuse (e.g., alcohol) and environmental toxins on the physical and mental wellbeing of the fetus, the infant, and the child. Furthermore, analysis of these substances and compounds in maternal or fetal biological matrices for diagnostic purposes will be welcome. We encourage the scientific community to make significant and innovative contributions to enhance our knowledge of the harmful effects of adverse environmental factors during development on children’s health. You are welcome to send a tentative title and a short abstract to our Editorial Office (ijerph@mdpi.com) for evaluation before submission. Selected full papers will be subject to a thorough and rigorous peer-review. We look forward to receiving your excellent work.

Guest Editors

Prof. Dr. Oscar Garcia-Algar

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
