

Special Issue

Primary Care and Public Health

Message from the Guest Editor

We would like to address some of the health problems that society faces by joining forces with experts in the field focused on different health specialties. It is important to unify specialists for the benefit of patients' health in a way that has a direct impact on improving their quality of life. Aging, multiple pathologies, and dependence excessively impact patients' health and quality of life. Good nutrition has been shown to promote health and prevent disease. The endocrine system regulates many of the most important functions of the human body, and any alteration can have serious consequences on the health of the individual. Thus, we should encourage the establishment of habits oriented towards the health, survival, and well-being of the individual. Communication between different healthcare professionals will have a direct impact on patient satisfaction and adherence to treatment and will generally yield better results in the healthcare model of the future. We hope that these articles are of interest and serve as a reference and inspiration for the development of initiatives that promote the care and improvement of patients' quality of life.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
