

Special Issue

Environmental Sustainability and Pro-environmental Behavior

Message from the Guest Editors

Greener individual and household lifestyles would significantly mitigate climate change. Although we have seen an increasing number of studies on environmental sustainability, the research seems still complicated and needed. On the one hand, straightforward communication and education targeting the public are less than desirable since climate change is a remote psychological event that does not elicit the individual perception of “happening now, here and to me.” This psychological distance hardly makes individuals take environmental issues as their responsibility. On the other hand, the prevalent “attitude-behavior” gap indicates non-negligible barriers in carrying out actual green behaviors. This Special Issue focuses on the theoretical and practical innovation in exploring the mechanism of environmental sustainability and pro-environmental behaviors. Research from the perspectives of individuals, corporates, NGOs, institutional organizations, and governments, or with an integrated view, is all welcomed. Contact us for a special discount for conference attendees.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
