

Special Issue

Problematic Alcohol Use and Health and Wellbeing across the Lifecourse

Message from the Guest Editors

This Special Issue will consider problematic (alcohol) use with an emphasis on alcohol consumption and mental health through the course of life. Currently, there are a number of proposed papers. These include a systematic review of the link between perinatal mental health and personality disorders, a review of international literature concerning home drinking in adult populations, and two papers relating to older drinkers. One of these papers is a systematic review concerning problematic substance use and older people, and the other looks at the context of drinking among older people. This includes consuming alcohol at home, with meals, and in pubs, bars and restaurants. We aim to include papers concerning the link between problematic substance (alcohol) use and mental health with regard to gender differences, different ethnic groupings, young people/adolescents, and other special populations.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
