

Special Issue

The Assessment of Wellbeing and Mental Health: A Global Public Health Issue

Message from the Guest Editor

This Special Issue calls for papers that present tools for the assessment of psychological constructs of interest in the interdisciplinary area of environmental health sciences and public health for which convincing evidence of validity and reliability can be provided. In order to ensure high-quality contributions, submitted papers should include the following:

- A clear definition of the construct measured;
- A concise review and critical analysis of the assessment tools already available for the measurement of the construct, with a convincing rationale for the need of a new one, or for the revision of the existing one;
- A rationale for the assessment of the criterion and/or construct validity of the tool;
- Samples that match the target population. While having representative samples is not a strict requirement, studies that use;
- Use of principled statistical methods for the assessment of the measurement model for the items of the tool must be used;
- Empirical evidence of reliability and validity;
- Association of test/questionnaire scores with relevant background characteristics;
- The full version of the tool must be provided.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
