Clinical and Health Psychology in Chronic Pain Management

Message from the Guest Editors

Chronic pain has a high prevalence in the general population worldwide and is associated with severe functional impairment, poor quality of life, and elevated health care and societal costs. It represents a great challenge for health professionals due to the scarcity of treatment options that provide improvements of relevant clinical significance. To date, the effectiveness of pharmacological interventions has been generally limited, and more ubiquitous effects have been found for nonpharmacological treatments such as different cognitive-behavioral approaches. For this Special Issue on “Chronic pain and Health Psychology”, cutting-edge research on the following topics is welcome: the effectiveness, cost-effectiveness, and neurobiological underpinnings of psychological therapies in individuals experiencing chronic pain.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
