Relationship with Technology Devices and Social Network: Screening of Psychosocial Wellbeing and Development Challenges in Children and Adolescents

Message from the Guest Editors

Technology device use and social network communication are becoming determinant factors influencing children and adolescents' social relationships, development, health, and adaption to their daily life. Appropriate knowledge regarding how these variables interact with the different developmental areas and domains are challenging for all caregivers who support a healthy development. For this purpose, we are collecting contributions for a Special Issue about psychosocial wellbeing and development challenges in children and adolescents in relation to technology and social media. The purpose of this Special Issue is to publish relevant research dealing with children's wellbeing and healthcare during infancy, childhood, and adolescence in relation to technology devices and social networks. Parental behaviors towards their children's education to technology use is an important topic too. The issue aims to cover the emotive, psychological, and social development of children relevant for their education, health, care, and wellbeing.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
