

## Special Issue

# Public Health Resilience and Vector-Borne Diseases

### Message from the Guest Editors

The concept of resilience is being used increasingly in the field of public health. More particularly, Health 2020 states that “building resilience is a key factor in protecting and promoting health and well-being at both the individual and community levels”. It specifies that collaboration among policy sectors and the full engagement of civil society are crucial for the development of supportive environments that are instrumental in building and strengthening resilience to improve health and well-being. All three levels for resilience are crucial and especially appropriate for the design of sustainable programs for the control of vector-borne disease. This Special Issue of *IJERPH* will bring together papers encompassing all levels of resilience in relation to vector-borne disease. We welcome papers that address, from any perspective, the incorporation of resilience in health systems for the control of vector-borne diseases and the resilience capacity that can be applied to these levels.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
