

## Special Issue

# Current Perspectives in Respiratory Diseases

### Message from the Guest Editor

The respiratory system is susceptible to environmental exposures. The global burden of respiratory diseases, due to ambient and household air pollution, is very high and increasing, especially in developing countries. There are chances for emerging environmental risk factors of respiratory diseases that are related to public health issues. There is a need for further scientific evidence to work on preventing environmental lung diseases. This Special Issue provides an opportunity to publish papers on environmental research in respiratory diseases, as well as public health issues with respect to respiratory diseases. We welcome papers related to evidence of associations and/or mechanisms between environmental factors and respiratory diseases. We are also interested in scientific evidence that could support strategies to prevent environmental lung diseases. All manuscripts will be peer reviewed by experts in this field and would be due in May 2019.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
