

Special Issue

Rural Development and Health in Developing Countries

Message from the Guest Editors

Good health is one of the Sustainable Development Goals. However, the achievement of this goal in rural areas of developing countries is strongly challenged due to climate change, environment pollution, and their vulnerable adaptation system. There is a growing realization of the relationship between improving the health of rural residents and promoting rural development at national and international levels. However, a comprehensive and socially relevant research approach needs to be established that is better aligned with the needs of rural residents, policymakers, and health professionals. This comprehensive and socially relevant research approach is characterized by inclusive perspectives for groups such as the physical health and mental health of infants, children, the elderly, migrants, and women, and paying more attention to socioeconomic factors such as family division of labor, family finance, food consumption, production behavior, and the public health service. Papers addressing these topics are invited for this Special Issue, especially those combining a high academic standard coupled with a practical focus on providing optimal solutions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
