Special Issue

Social Epidemiology to Eliminate Disparities

Message from the Guest Editors

Social epidemiology is focused on understanding the fundamental causes and consequences of health inequities. Specifically, we explicate the ways in which society is organized to support or hinder population health. For this Special Issue, we are interested in action-oriented, policy- and practice-informative scholarship focused on finding solutions to health disparities. Potential topics of interest include:

- Health impacts of systems of oppression (racism, sexism, classism, heterosexism, ableism, etc.);
- Bidirectional relationships between health inequities and social and/or political processes;
- Multi-level public health interventions focused on ameliorating social inequities in health;
- Mixed-methods studies that quantify and contextualize associations between macro-social determinants and population health;
- Within-group analyses that draw from a life-course perspective to identify risk as well as protective factors for adverse health among groups made vulnerable by their social position;
- Research that is co-led, co-created, and co-authored by relevant community stakeholders that is focused on disrupting systems of power to achieve health equity.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
