

Special Issue

Advances in Soil and Sediment Pollution

Message from the Guest Editors

This Special Issue seeks research papers on the various environmental aspects of soil and sediment pollution, with special emphasis on new research methods, analysis of emergent contaminants, and detection of microplastics, contaminant sources, and transfer from soil to sediments. Submissions on the effect of pollutants on living organisms in soil and sediment environments are also welcome, including those covering the bioaccessibility of contaminants, transfer through the food chain, accumulation processes, and ecotoxic responses. Regulatory issues and legal considerations are also of interest. Submissions reporting results from different regions around the world are particularly welcome to ensure a worldwide perspective on this subject.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
