

## Special Issue

# State-of-the-Art of Oral Health in Japan and Other Aging Countries

### Message from the Guest Editor

Oral diseases, such as dental caries and periodontal disease, are extremely detrimental to public health due to their high incidence, successively known to be associated with various systemic diseases such as cardiovascular diseases, chronic respiratory diseases, diabetes, rheumatism, cancer, etc. Japan is facing a super-aging society as well as a need to extend the healthy life span and improve the quality of life. To this end, one key issue is “oral health”, and the improvement of oral hygiene and chewing ability is known to be effective in reducing aspiration pneumonia and improving activities of daily living. Furthermore, we have to focus on oral health in children and adolescents, not only to survive the super-aging society, but also to improve the oral and general health of the next generation. This Special Issue welcomes manuscripts focusing on the current state of knowledge on oral/dental health in Japan and Other Aging Countries, all original (both of clinical research and basic research) and review articles being welcome. Other accepted manuscript types include methodological papers, case series, brief reports, and commentaries.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
