

Special Issue

Substance Use, Treatment, and Harms during COVID-19

Message from the Guest Editors

The global COVID-19 pandemic has posed major challenges to communities and the public health sector for more than a year now. During the pandemic, an ever-growing body of research has demonstrated both increases and decreases in substance use. While changes in substance use behavior are increasingly well understood, there is a paucity of research on the implications for substance treatment and attributable harms. In this special issue on “Substance Use, Treatment, and Harms during COVID-19”, we call for papers examining how substance use and treatment as well as attributable harms have changed with the COVID-19 pandemic. We welcome both theoretical and empirical papers addressing this subject and aim to bring together different perspectives on substance use, health care provision, and substance-attributable harm. This includes both qualitative and quantitative approaches examining changes in substance use, treatment provision, as well as community and policy responses during COVID-19. Submission of articles focussing on high-risk and marginalized communities that have been most severely hit by the pandemic are particularly appreciated.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
