

Special Issue

Suicide and Suicide Prevention from a Global Perspective

Message from the Guest Editors

Suicide is a major public health issue that is one of the leading causes of death worldwide. Globally, suicide claims the lives of over 800,000 people each year, and for every suicide death, it has been estimated that there are at least another 20 suicide attempts. Due to numerous complex and interrelated risk and protective factors, many questions regarding the prevention of suicide remain unanswered. More research is urgently needed to develop a strong evidence base from which to develop effective intervention strategies. This call for papers aims to bring together a wide range of interdisciplinary research around the world to provide high-quality evidence and further our current understanding of what works in suicide prevention. Manuscripts will be peer-reviewed by experts in the field and are due by May 2021. The of this Special Issue are Victoria Ross, Kairi Kõlves, Ella Arensman and Diego De Leo.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
