

Special Issue

Ingredients for a Sustainable Wholesome Network in Mental Health

Message from the Guest Editor

We are organizing a Special Issue on the impact of the environment, e.g., the relationships, on mental health in the *International Journal of Environmental Research and Public Health*. We focus on quantitative and qualitative methods in outcome and process research, including mixed methods designs, and operationalization of pathoplastic, or effective ingredients for change processes. This Special Issue also aims to provide theoretical orientations for multiprofessional clinical work. The necessity and meaningfulness of a differentiation and systematization of the terms “environment” and above all “relationship” are demonstrated, and practical examples and links to similar framework models are given. This Special Issue is open to any subject area related to the impacts of the natural, psychic, built, developmental, social environments, and their change processes influencing mental health. The listed keywords suggest just a few of the many possibilities.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
