Sustainable Development in Human Environment—Current and Future Challenges

Message from the Guest Editors

Sustainable development occupies a key place among the development priorities of global societies and economies. In today's world, sustainable development becomes a kind of compromise between environmental, economic, social and health goals that determine the survival and well-being of the present and future generations. This means securing resources in the form of natural, man-made material, intellectual and social capital. The social aspect, which is usually equated with education and gaining the ability to solve social and health problems, is a particularly important challenge for present and future generations. The challenges faced by humans in the context of the ongoing COVID-19 pandemic and after it seem to be extremely important.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
