

Special Issue

Telerehabilitation for Patients

Message from the Guest Editor

As telerehabilitation is increasingly being implemented across patient groups, the research on the patient perspective of telerehabilitation has been fragmented and sparse. This Special Issue welcomes studies or reviews of various telerehabilitation formats, either planned or acute implementations due to COVID-19 pandemic. We are particularly interested in studies: (i) addressing how telerehabilitation aims to overcome participation and adherence barriers, (ii) focusing on how patients engage with various types of technology, (iii) comparing the patients' experience of conventional rehabilitation compared to telerehabilitation, (iv) focusing on how telerehabilitation may expand our understanding of what telerehabilitation could entail. Studies combining two or more of these aims may be of special interest.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
