

Special Issue

Health Behaviors and Tertiary Prevention among Cancer Survivors

Message from the Guest Editor

First, this special issue will probably help to face the lack of public health data especially on second cancer prevention practices, more particularly data on health behaviors of cancer survivors. Indeed, it can increase awareness among patients and health care givers of the important need for tertiary prevention. Secondly, it will give us the possibility to document the length of social and cultural dimension in numerous aspects of lifestyle and health behaviors changes after cancer diagnosis. Selection of eligible papers will be based on three priorities.

- Public health, SHS and social epidemiology papers will be requested.
- Due comparatively to the little research published on coping with cancer among ethnic or cultural minorities at time of diagnosis, during treatment or in the course of survivorship, attention will be paid to studies that investigated this particular thema.
- Results of interventional research finding and community-based intervention will be appreciated.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
