To Be Healthy for the Elderly: Long Term Care Issues around the World

Message from the Guest Editor

There are numerous issues that must be addressed in healthcare around the world—among them, concerns about the quality of life of the elderly who stay in long-term care settings such as nursing homes, assisted living, and geriatric hospitals, both in the public and private sectors, especially due to the shortage of healthcare workers and high staff turnover rate in many countries. Even worse, the elderly in long-term care settings are one of the most vulnerable populations that have been impacted by the COVID-19 pandemic. This Special Issue focuses on research related to issues linked to the elderly and how to improve their quality of care. This may include interventions to improve quality of care, challenges related to COVID-19 and how to overcome it, staffing issues, policies, regulations, resident-centered care, dementia, culture change, burdens of caregivers, and economic analysis of expenses. We invite researchers from the fields of medicine, nursing, public health, social work, occupational therapy, physical therapy, health economics and other social sciences to submit high-quality empirical papers or systematical reviews related to the issues.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
