

Special Issue

The Effects of Air Pollution and Traffic Exposure in the General Population

Message from the Guest Editor

Exposures to air pollution remain a key determinant of morbidity and mortality worldwide. Research in this area has been instrumental in setting policies worldwide, however, data is still needed in many countries around the world, and on understudied diseases. More information is also needed on how traffic-related exposures (including air pollution) interact with other aspects of the environment (e.g., temperature, humidity, greenness, urban form) to impact health in the general population. Intervention studies are also needed to provide examples of how changes in behaviors or in exposures can lead to changes in health outcomes. This Special Issue is open to any subject area related to the impacts of air pollution or traffic exposures on public health. The listed keywords suggest just a few of the many possibilities.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
