

Special Issue

Urban Green Spaces

Message from the Guest Editor

Urban Green Spaces (UGS) are considered spaces of human–nature interaction in the urban environment, actively participating in the provision of ecosystem services that improve the quality of life and well-being of citizens. In addition, UGS have become a key element to reinforce the proactive resilience of cities in the face of the growing impacts of climate change. Their undeniable positive effects are counteracted, however, by nuisances or harmful effects that may occur in the development of their ecosystem functions, which are perceived as harmful by the population and which cause economic, social, and environmental damage. This Special Issue of the *International Journal of Environmental Research and Public Health* aims to address all the positive and negative aspects related to the Urban Green Spaces, in order to obtain a global vision that allows establishing the net balance of costs and benefits.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
