Social Vulnerability and Health Care: Analysis and Intervention

Message from the Guest Editors

The great socio-economic inequalities present in the world fragment the social fabric into groups of populations with extremely uneven life expectations. The lower-income groups and those with poor socio-cultural integration with the general population show a greater social vulnerability. By social vulnerability is meant a condition of uncertainty of life, with different degrees of economic and social hardship, which affects all age groups, reflecting on the health status of the individual. When physical disability is added to socio-economic barriers, the picture of “social inequity” becomes even greater. Vulnerability is primarily a social policy problem, and only after that can it be considered as a health problem. Therefore, the solution to the problem is twofold: socio-cultural and health.

The goal of this Special Issue is to classify vulnerabilities and identify appropriate socio-health intervention strategies that are not limited to the medical sciences. Works related to the epidemiology, prevention, and treatment of pathologies related to socio-health vulnerability are welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
