Work, Health, and Equity

Message from the Guest Editors

Work, a complex multifaceted area of research, is closely intertwined with individual and population health. The many facets of work including unemployment, the employment relationship and attendant employment quality, and the day-to-day conditions in any given job can support, detract or combine in myriad ways to impact worker health and well-being over time. In recent decades, research on work and health has grown to encompass political, legal, physical, social, and relational influences which better mirror this complexity. In tandem, evidence has accumulated showing that geographic, economic and social factors create sub-populations—which vary by place and time—who systematically experience clusters of unwanted work-related factors that impede the achievement of health equity, both within and across nations. Work can be purposefully leveraged to support individuals and communities, promote population health, and move closer to health equity through research from multiple disciplines that informs political will and action across multiple sectors of society.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
