

Special Issue

Rising Risk Factors and Management of Disability in Working-Age Adults

Message from the Guest Editors

Workers in the healthcare sector have an increasing incidence of infectious, metabolic, and cardiovascular diseases as well as on-the-job-injuries. Accordingly, the average working-age mortality rates increased in the US after 2010. Therefore, it is clear that employees in the healthcare sector deserve special attention in terms of prevention, care, and treatment of disabilities. The first aim of this Special issue is to offer an update on the rising risk factors for the health of healthcare workers. Secondly, we will face the timeless challenges related to the management of social disability in working-age adults. Although more research is needed to understand causal mechanisms, we recommend the urgency of adequate policy, because not acting to address the several health risk factors and social disabilities among working-age adults threatens the future wellbeing of families and communities.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
