

Special Issue

The Use of GIS and Soft Computing Methods in Water Resource Planning

Message from the Guest Editors

SC methods have been acknowledged as advanced methods capable of discovering hidden and unknown patterns and trends from large databases, whereas GIS is presently the main and most important technology for spatial and temporal data manipulation and advanced modeling. The implementation of SC methods and GIS have contributed to the identification and evaluation of potential solutions related to water resource problems, providing knowledge essential to water resources management plans. This Special Issue aims to provide an outlet for peer-reviewed publications that implement state-of-the-art methods and techniques incorporating SC methods and GIS to map, monitor, evaluate, and assess water resources. This Special Issue aims to cover, without being limited to, the following areas: (a) hydrologic and hydrogeological modeling of surface water, (b) groundwater monitoring, (c) groundwater spring potential mapping, (d) water supply and sewer systems modeling, (e) source pollution modeling, (f) stormwater control, and (g) flood susceptibility mapping and floods disaster management.

About the Journal

Message from the Editor-in-Chief

The *ISPRS International Journal of Geo-Information* invites you to submit research articles, reviews, and reports covering topics of the whole domain of geo-information. Although the journal was only founded in 2012, it has already achieved wide recognition in the scientific community. We are proud that since April 2015, our journal is indexed by the SCIE of the Web of Science. As Editor-in-Chief, I encourage you to consider *IJGI* for your scientific papers and would be pleased to welcome you as authors.

Editor-in-Chief

Prof. Dr. Wolfgang Kainz

Cartography and Geographic Information Science, Department of
Geography and Regional Research, University of Vienna,
Universitätsstr. 7, A-1010 Vienna, Austria

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, PubAg, dblp, Astrophysics Data System, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Geography, Physical) / CiteScore - Q1 (Earth and Planetary Sciences (miscellaneous))
