## Geo Data Science for Tourism

### Message from the Guest Editors

The hospitality and tourism industries are considered as critical parts of the economy of a Country. Thanks to the availability of a huge quantity of geographical data, such industries can offer high-quality Web applications, which improve the attractiveness of tourism destinations as well as all the businesses related to tourism. In addition, the use of Web applications for tourism helps to understand tourists behavior, by managing, analyzing and visualizing huge quantities of geographical data, such as those contained in reviews about accommodations. However, Web applications applied to the tourism domain present several issues and challenges, such as their durability and copyright related to collected data. The use of open data for tourism (e.g. accommodations, restaurants, attractions, events, transportations) and open source maps to represent geographical data can be an answer to all these challenges.

## About the Journal

### Message from the Editor-in-Chief

The *ISPRS International Journal of Geo-Information* invites you to submit research articles, reviews, and reports covering topics of the whole domain of geo-information. Although the journal was only founded in 2012, it has already achieved wide recognition in the scientific community. We are proud that since April 2015, our journal is indexed by the SCIE of the Web of Science. As Editor-in-Chief, I encourage you to consider *IJGI* for your scientific papers and would be pleased to welcome you as authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, PubAg, dblp, Astrophysics Data System, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Geography, Physical) / CiteScore - Q1 (Earth and Planetary Sciences (miscellaneous))
