Geomatic Applications to Coastal Research: Challenges and New Developments

Message from the Guest Editors

A large percentage of the world's population is situated along the coastal zone. Due to their intrinsic nature, coastal areas are highly vulnerable to natural hazards, which are forecast to increase in a climate change scenario. These threats demand specific monitoring programs and sustainable coastal management plans. Therefore, detailed information about the processes taking place in coastal areas is essential for coastal managers. In fact, remote sensing and GIS have been widely used to support conventional methods for monitoring coastline change. Additionally, free access to data from Earth Observation satellites provides the capability to monitor coast changes in a cost-effective manner. Furthermore, many advanced methodologies have been developed using close-range digital images for change detection. This Special Issue aims to collect high-quality, innovative research papers dealing with the collection, storage, integration, modelling, analysis, and display of spatially georeferenced information about coastal systems. We welcome different applications and new case studies of geomatics use to increase the knowledge of the coastal environment in diverse topics.

About the Journal

Message from the Editor-in-Chief

The *ISPRS International Journal of Geo-Information* invites you to submit research articles, reviews, and reports covering topics of the whole domain of geo-information. Although the journal was only founded in 2012, it has already achieved wide recognition in the scientific community. We are proud that since April 2015, our journal is indexed by the SCIE of the Web of Science. As Editor-in-Chief, I encourage you to consider *IJGI* for your scientific papers and would be pleased to welcome you as authors.

Editor-in-Chief

Prof. Dr. Wolfgang Kainz
Cartography and Geographic Information Science, Department of
Geography and Regional Research, University of Vienna,
Universitätsstr. 7, A-1010 Vienna, Austria

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, PubAg, dblp, Astrophysics Data System, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Geography, Physical) / CiteScore - Q1 (Earth and Planetary Sciences (miscellaneous))
